ZoikoStream Organizer Chatbot — Local Test Report

Component: Operator Guide (authenticated console assistant, ZST-UX-GUIDE-001) · Persona tested: Organizer (**org_admin**) · Date: 2026-11-06 · Branch: chatbot

1. Summary

Total checks	Chatbot queries sent	Passed	Failed	Median latency	p95 latency
103	93	103	0	88 ms	177 ms

93 natural-language queries were sent to the Organizer chatbot (target: 50+), plus 5 confirmation-flow checks and 5 console endpoint checks (103 checks in all). The first run had **95 passing and 8 failing** checks (answer-quality and routing defects, no data leak, no unauthorised change). All 8 were fixed and the suite was re-run: **103 of 103 pass**, and the existing 204 Operator Guide tests still pass, plus 10 new regression tests.

2. Test setup

• **Runs against the real backend, locally.** The FastAPI app and all */api/operator-guide* routes were exercised in-process (Starlette TestClient) with real auth tokens, real SQLAlchemy models and the real platform endpoints for confirmed actions.

• **Database:** local Docker Postgres container *guide-test-pg* (port 55432), database *opguide_test*, truncated and re-seeded at start. The remote DB was not touched.

• **LLM provider:** *mock* (deterministic). Intent routing, tools, policy and facts are the production code paths; only the optional model-written explanation layer is mocked. Wording produced by a live Anthropic/Groq model was **not** tested.

• **Seed data:** Org “Meridian Events” with an organizer (org_admin), a host, a viewer-role user; 7 events — Spring Gala (no host, no recording), Quarterly Town Hall (ready), Live Keynote (live, healthy, viewers 120/135/150), Stale Webinar (live, telemetry 20 min old), Annual Summit 2025 (ended), Private Board Meeting (private, registration required). A second org “Rival Corp” holds “Rival Secret Launch” for isolation tests.

• **Not covered:** browser/UI rendering of the widget, a live LLM, load testing, real RTMP/LiveKit telemetry (health/viewer data was seeded).

3. Results by category

Category	Checks	Passed	Failed
Conversation	6	6	0
Readiness	7	7	0
Event details	6	6	0
Live ops	9	9	0
Access	4	4	0
Replay	3	3	0
Analytics	3	3	0
Overview	4	4	0
Other reads	4	4	0
Documentation	3	3	0
Drafts	5	5	0
Actions (propose)	7	7	0
Safety: blocked ops	11	11	0

Category	Checks	Passed	Failed
Escalation	2	2	0
Tenant isolation	5	5	0
Adversarial input	8	8	0
Access control	3	3	0
Multi-turn follow-up	3	3	0
Confirmation flow	5	5	0
Endpoints	5	5	0

What held up well

• **Readiness** answers come from the readiness service, list the unmet gates by name, and tally checks correctly (4 of 6, 6 of 6). Natural phrasings (“what’s blocking us”, “can we go live”, “preflight checklist”) all route correctly.

• **Blocked operations:** go live, end broadcast, stop recording, failover, override gate, cancel event, delete recording, show stream key, change roles, refund — all refused with a pointer to the right console control; no secret returned. “How do I delete an event?” is answered from docs, not refused.

• **Governed actions:** chat/polls/visibility/recording/registration/support-ticket requests produce a proposal only; the database was verified unchanged until confirmation. A second user could not confirm the organizer’s proposal (404); confirmation executed through the platform with a verified receipt; replaying the same idempotency key did not re-apply; cancel left state untouched.

• **Tenant isolation:** asking for another organization’s event by name, by prompt-injection, or via a forged event id leaked nothing (“I can’t find that event in your organization”).

• **Access control:** viewer role → 403, no token → 401, host role allowed. **Robustness:** XSS payload, SQL-injection text, 3,000-char input (rejected with 422), empty input (422), gibberish (honest “I don’t have documentation”) all handled without errors.

• **Conversation memory:** follow-ups “and the replay?” and “what about access?” correctly reuse the prior event context.

• **Staleness:** the response for the 20-minute-old telemetry event carries stale=true.

• **Performance:** median 88 ms, p95 177 ms, max 1149 ms per message (mock LLM, local DB).

4. Findings from the first run, and the fixes applied

ID	Sev.	Check #	What happened	Fix applied
F1	**Medium**	#22 (also #60)	“How many viewers are watching right now?” on a live event is routed to the 30-day analytics tool and answers “highest peak audience was 150”. Live Keynote has a current count of 120; Stale Webinar has 40 (20 min old). The user's question (current viewers) is not answered.	**Fixed.** New live-audience routing (“watching / viewers ... now”) sends these to the live-health tool, whose answer now states “N watching now”, or says the sample is too old to report a current count.
F2	**Medium**	#25	“What is the ingest status?” with a live event selected goes to documentation (generic text on RTMP/WHIP input states) instead of live health. The DEFINITIONAL pattern (“what is the…”) wins because the sentence has no my/our/this/now word.	**Fixed.** “ingest / encoder / signal status” routes to live health unless the user asks what it *means*.
F3	**Medium**	#75	“Tell me about Rival Secret Launch” is refused as *blocked.secret* (“showing or rotating keys, secrets and stream keys…”). The word “secret” in an event title trips the R6 secret rule. Safe (no leak) but a false positive: an organizer with an event titled “Secret Santa” would be refused. In this test the title belonged to another org, so the correct reply is “can’t find that event”.	**Fixed.** The secret rule now matches credential phrases (client/webhook/signing secret, secret key, “my secrets”) instead of the bare word “secret”. “Show me the client secret” and stream/API-key requests are still blocked.
F4	**Medium**	#44 (also #77, #78, #80)	Off-topic documentation returned instead of an honest gap: “How does a waiting room work?” returns the support-case lifecycle. The prompt-injection and “admin mode” probes (#77, #78, #80) get unrelated doc snippets (attendance rate, support-access policy). Nothing sensitive is leaked, but the answers look confidently wrong.	**Fixed.** Added a Waiting room section to the documentation, and weak trailing documentation hits (below 40% of the best score) are dropped, so unrelated sections no longer appear.
F5	**Medium**	#59	“What needs my attention?” returns “Nothing needs your attention right now” while Stale Webinar is live with a health change 30 min ago and viewer telemetry 20 min old (flagged stale on the event itself). The attention list ignores stale telemetry on live events.	**Fixed.** Attention now lists a live broadcast whose audience data is older than the stale threshold (or never arrived), with a link to the live console.
F6	**Low**	#28	“How many people registered?” gives no registration count and appends the unrelated 30-day peak audience.	**Fixed.** “How many ... registered / signed up” routes to the access tool only, whose answer now includes “N registered” (and the limit).
F7	**Low**	#32	“How long are recordings retained?” replies “Which event do you mean?” although retention is a policy/documentation question.	**Fixed.** Retention-policy questions go to documentation; the docs index also gained light stemming (retained/retention, recordings/recording).
F8	**Low**	#61	“Which events are live right now?” falls through to the generic capabilities text instead of listing live events (Live Keynote, Stale Webinar).	**Fixed.** “Which events are live?” routes to the overview, which now opens with “Live now: ...”.

Other observations (not failures): single-event live answers are terse (“No critical issue detected.”) and rely on the status card for viewers/health detail; “Is recording enabled?” answers “No recording exists for this event yet” in the text, with the enabled/disabled state only in the card; non-English input (Spanish) returns the English honest-gap message. “DROP” in an injection string was read as the word “drop” (incident topic) — harmless.

5. Full query log

Intent = the route Guide chose. HTTP shows the status code; answers are truncated. Result: PASS / FAIL against the expectation written for that query (intent, required phrase, forbidden phrase, or status).
